VERDICT

CLEARED TO SHARE

OPEN GATES

0 OPEN

BADGE

EARNED

Cleared to share. Three flags on the first pass, all closed on the second.

Seatbelt read the Northstar Waitlist build, flagged three things, the agent fixed them, and a second pass confirmed it. This is sample data for the landing page, not a live scan.

- Secrets.** API key pattern in the client bundle. Fixed: moved server side and rotated.
- Payments.** Stripe checkout for paid early access. Verified end to end on the second pass.
- Risky shortcuts.** Debug delete route at /api/debug. Fixed: removed.
- Login, customer data, databases.** Present and scoped. Noted, nothing to fix.

FLAGS

GATE	FLAG	SUMMARY	STATUS
INFO	login	Sign in route detected (/auth) and member dashboard at /app. Route looks scoped.	Noted
SOFT	payments	Stripe checkout route for paid early access tier	Verified
HARD	secrets	API key pattern in client bundle NEXT_PUBLIC_* sk-...4f2a	Fixed
INFO	customer data	Stores waitlist emails, referral codes, and profile names	Noted
INFO	databases	ORM config found. No connection string or admin UI in the client.	Noted

GATE	FLAG	SUMMARY	STATUS
SOFT	risky shortcuts	Debug delete route present (/api/debug)	Fixed

FIX HISTORY

FLAG	FIRST READ · 10:42	AGAIN · 10:51
secrets	Open · hard gate	Fixed · moved server side, key rotated
payments	Flagged · verify checkout	Verified end to end
risky shortcuts	Flagged · debug delete route	Fixed · route removed

Verified by Seatbelt, earned. A real scan on an app with substance, hard gates cleared on the second pass. The badge links to this report, not a sticker.

Honest scope: Seatbelt reads structure and clues on the folder or ZIP you share. Not a pentest. Not hacking production. Does not read live customer private data. Secret values are truncated in cues; only prefixes appear above.
